

Texas Metal Tanks – Inlet and Outlet Locations

Thank you for purchasing a cistern! Each cistern comes with one outlet standard. This is either a 3/4", 1 1/4", or 2" bulkhead connection at the bottom of the tank. This can be attached to a hose, spigot, or irrigation system. A spigot can be screwed in directly to the 3/4" bulkhead connector.

You may also desire an inlet for the gutter / downspout connection and an overflow.

In determining where the holes should go, we use a clock diagram. The TMC logo goes at 6:00. So if you are looking at the logo on the tank, that is at 6:00, to the right of the tank is 3:00 and to the left is 9:00. The back of the tank is 12:00.

Example:

Note: This is an example. If you are connecting multiple tanks you might have two bulkhead connectors at the bottom. Call us and we can help!

	(Optional) Inlet	(Optional) Overflow
Please indicate your outlet size and location (included):	_____ 2" - \$30 (Well Only)	_____ 2" - \$30 (Well Only)
	_____ 3" - \$35	_____ 3" - \$35
	_____ 4" - \$40	_____ 4" - \$40
3/4" _____		
1 1/4" _____		
2" _____		
3:00 _____	3:00 _____	3:00 _____
6:00 _____		
9:00 _____	9:00 _____	9:00 _____
12:00 _____	12:00 _____	12:00 _____

12" Basket Inlet \$45 _____ (position your tank under one downspout)
 16" Basket Inlet \$60 _____
